

DECLARATION OF CONSENT TO THE IOZK

for processing of autologous tumour cells and their subsequent cryoconservation

I hereby request the IOZK to receive my cryoconserved tumour material, provided a sufficient amount is available, keeping it in cryoconservation (deep freeze at -80 °C) and preparing it.

The costs for further deep-freeze storage of prepared tumour material at -152 °C are 360,00€ per year, calculated at the beginning of each year of storage.

Costs for additional histologic or microbiologic analyses, if necessary, will be charged separately by the service providers.

The processed tumour material remains my property. Therefore, a written request is necessary before the material may be discarded.

Should there be excess material, I agree to its anonymous use for stability studies or to carry out validations within the framework of legal provisions for the production of pharmaceuticals.

This will not cause any detriment to my therapy.
