IOZK | IMMUN-ONKOLOGISCHES ZENTRUM KÖLN

1 SURGEON TO PERSON OF TRUST

INSTRUCTIONAL SHEET

Instructions in accordance with the pharmaceutical law for extraction of tumour tissue and organization of transport

A person of trust has been informed by the patient about the date of operation and will organize the delivery of the transport box and its transport.
In the transport box you will find a standardized plastic container, a spatula and thermal gloves.

Put a water resistant tag with the patient's name and date of birth on the sterile plastic container to receive the tumour material.

Secure a representative, vital section of the tumour tissue with as little necrotic component as possible. **Minimal size: 1,5 cm^3**.

Do not add any liquid or conservant such as DMSO, Formalin etc.

Next, place the plastic container into the delivered transport box.
The Plastic container must be „**buried**" at the centre of the dry ice using the spatula.
Caution: Dry ice causes damage to skin and tissue. Please use the included gloves and spatula!

Place form [1] and form [2] in the external cardboard packaging of the transport box.
The person of trust will receive the closed box and transport it to the IOZK.

. . . .

Person of trust: Name Tel:

In the event that the transport box was not delivered on time, store the tumour material in a sterile plastic container at -20°C to -80°C or in dry ice until the box arrives.

By signing, I confirm that the Instructional Sheet has been read and understood.
